HR Analysis Dashboard

Workforce Insights & Analytics

Presented by: **Archi D. Dholakiya**

Introduction to HR Analytics

What Is HR Analytics?

Human Resources Analytics transforms raw workforce data into strategic insights that drive organizational decisions. By leveraging metrics, trends, and patterns, HR leaders can move beyond intuition to evidence-based strategies that optimize talent management, improve retention, and enhance organizational performance.

Overall Workforce Overview

22K	38	35%	75.2%	24.8%
Total Employees	Average Age	Attrition Rate	Headquarters	Remote

The organization maintains a substantial workforce with a balanced age distribution. The majority of employees work from headquarters locations, while nearly a quarter operate in remote capacity. This geographic distribution presents opportunities for optimizing work arrangements and potentially reducing real estate costs while maintaining productivity.

Hiring Trends Analysis

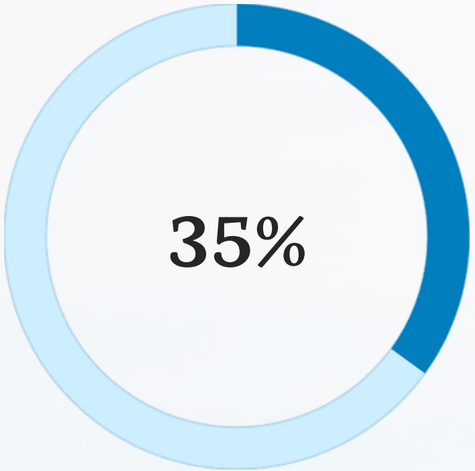
1. **Historical Baseline**
   Hiring rate stabilized between 4-5%

2. **2020 Inflection**
   Slight decline observed near 2020

3. **Current State**
   Consistent but slowing growth

Over the observed period, hiring rates have remained relatively stable within the 4-5% range, demonstrating predictable recruitment patterns. However, the slight decline noted near 2020 suggests a shift in growth trajectory. This slowing hiring growth may reflect market saturation, budget constraints, or a strategic pivot toward internal development rather than external hiring. Organizations should evaluate whether this trend aligns with business objectives or indicates potential challenges in talent acquisition.

Attrition Analysis: The Critical Challenge



Overall Attrition Rate

Employees leaving annually

What This Means

A 35% attrition rate represents a significant challenge that demands immediate attention. High turnover not only increases recruitment and training costs but also disrupts team continuity, reduces knowledge retention, and impacts morale among remaining employees.

Strategic Implications

This elevated attrition rate suggests underlying dissatisfaction among employees. Organizations must develop and implement robust retention strategies that address root causes rather than symptoms. Proactive measures include competitive compensation, career development opportunities, work-life balance initiatives, and improved management practices.

Attrition by Department

Understanding which departments experience the highest turnover helps target retention efforts where they're needed most. The data reveals significant variation across organizational units:

Sales Department

335 employees departed

Highest attrition rate, likely driven by performance pressure and commission-based compensation models

R&D Department

High turnover observed

Competitive market for technical talent and potential burnout from intense project cycles

Support Department

High turnover observed

Customer-facing roles with repetitive tasks and potentially inadequate recognition

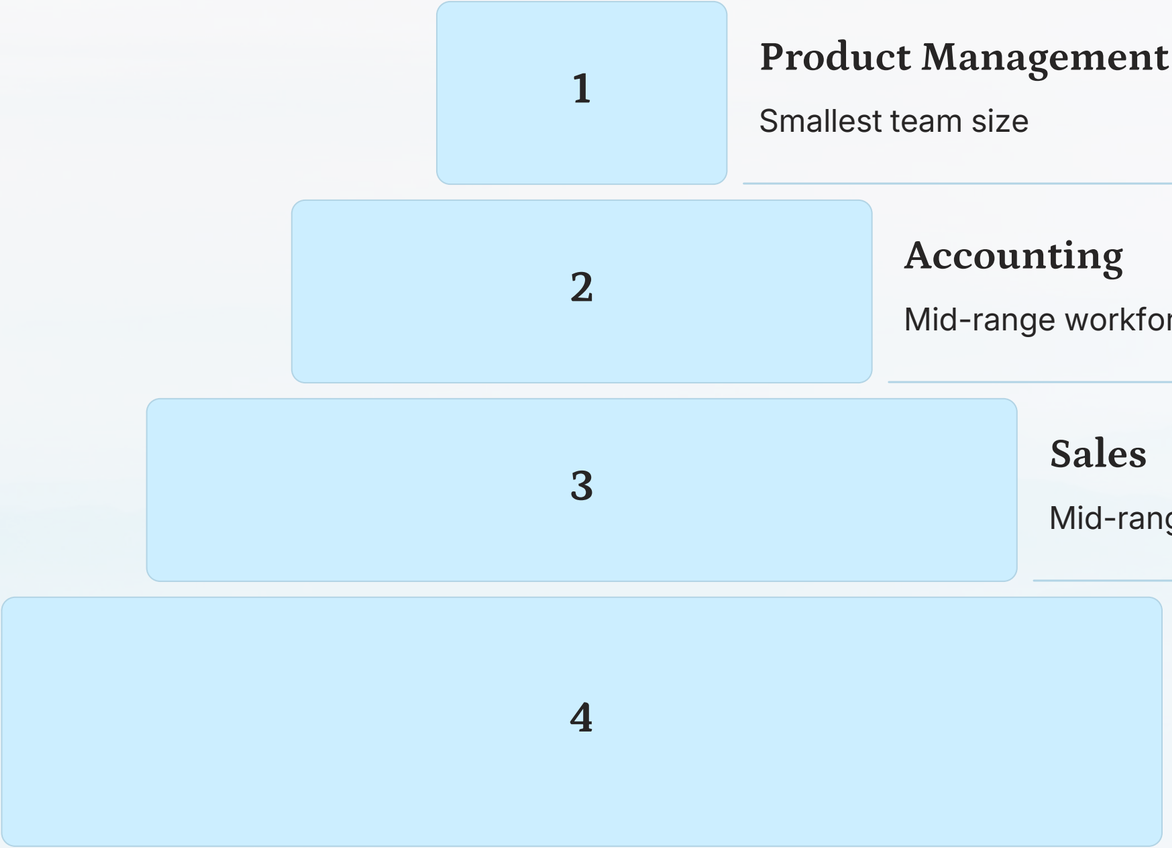
Legal & Auditing

Minimal attrition

Stable, specialized roles with clear career progression and work-life balance

The concentration of attrition in Sales, R&D, and Support departments suggests these areas require immediate intervention. Meanwhile, Legal and Auditing's low turnover provides benchmarks for successful retention practices that could be replicated elsewhere.

Department-wise Employee Distribution



Product Management

Smallest team size

Accounting

Mid-range workforce

Sales

Mid-range workforce

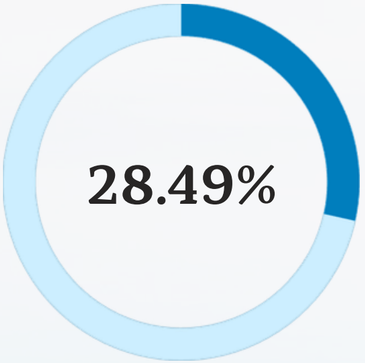
Engineering

6,700 employees

Largest department by far

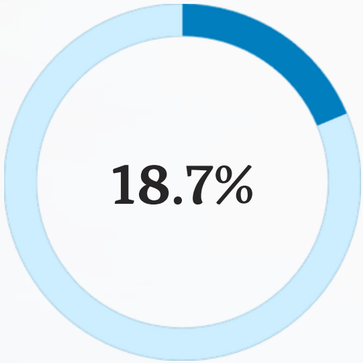
Engineering dominates the workforce with 6,700 employees, representing nearly 31% of total headcount. This reflects the organization's technology-driven nature and product development focus. Accounting and Sales follow with moderate team sizes, while Product Management operates with the leanest staffing. This distribution raises questions about resource allocation and whether Product Management has adequate staffing to effectively guide engineering priorities and business strategy.

Workforce Diversity Metrics



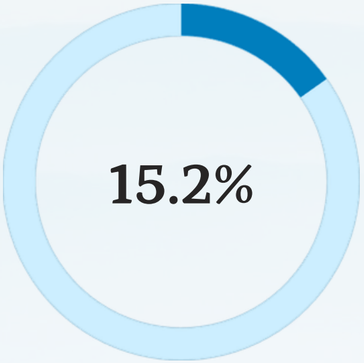
White

Largest demographic group



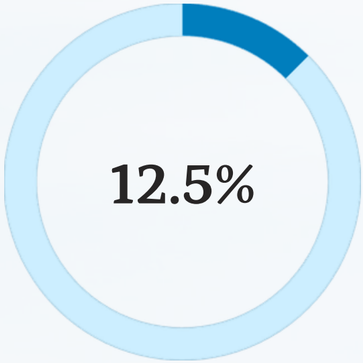
Asian

Second largest group



Black

Third largest group

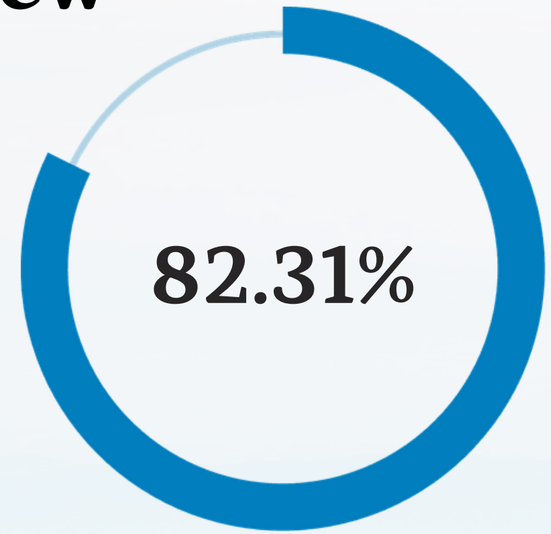


Hispanic

Fourth largest group

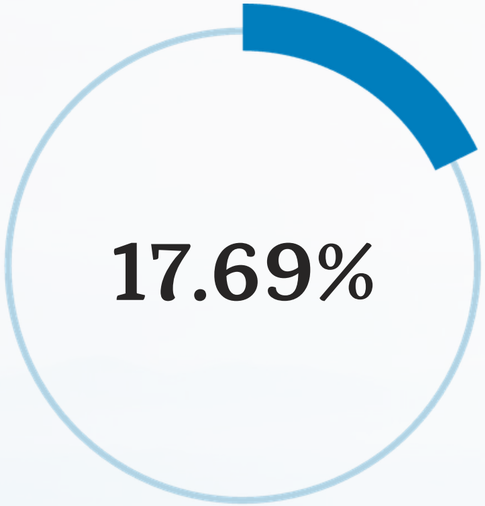
The workforce shows moderate diversity across racial and ethnic groups, with White employees representing the largest segment at 28.49%. While this indicates some diversity, the organization may benefit from targeted initiatives to increase representation from underrepresented groups, particularly in leadership positions. A more balanced demographic distribution can enhance innovation through diverse perspectives and better reflect the customer base served by the organization.

Employee Status Overview



Active Employees

Currently working



Terminated

No longer with organization

The current status distribution shows that 82.31% of employees remain active, indicating general workforce stability despite the high attrition rate. However, the 17.69% terminated represents significant turnover that impacts organizational knowledge, team dynamics, and operational continuity. The gap between high attrition rates and current active status suggests that while turnover is substantial, the organization continues to retain the majority of its workforce. This pattern may indicate that new hires leave at higher rates while tenured employees remain, or that the organization successfully backfills positions despite losses.

Key Insights & Strategic Recommendations

Critical Insights from Data

1 **High Attrition Rate**

35% turnover demands immediate attention and strategic intervention

2 **Sales Department Crisis**

335 employees departed signals urgent retention challenges

3 **Centralized Workforce**

75.2% at headquarters suggests remote work opportunities

Strategic Recommendations

01

Implement Retention Programs

Develop targeted strategies addressing root causes of turnover

02

Expand Remote Flexibility

Reduce costs and increase talent pool by expanding remote options

03

Enhance Employee Engagement

Launch satisfaction surveys and career development initiatives
